

# Mock Survey Tool for JCI Tracers with AMP<sup>®</sup>

Mock surveys are an essential tool for the continuous improvement of patient safety and preparing for Joint Commission International surveys. However, coordinating and consolidating findings from various locations into meaningful reports can be a difficult and time-consuming task. We recognize the importance of being proactive and utilizing tools that can streamline the mock survey process.

## How we can help

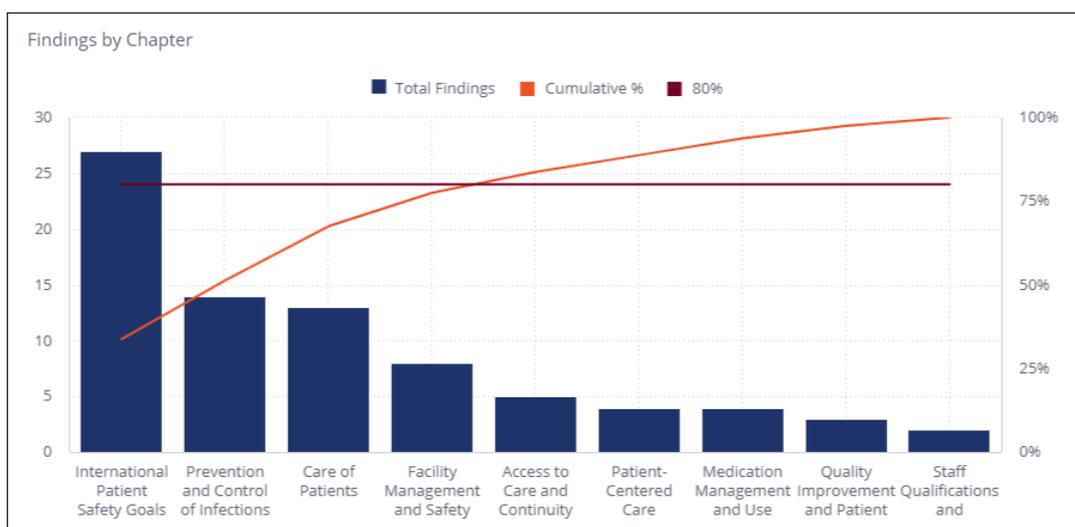

For an additional fee, JCI Tracers with AMP Mock Survey Tool enables your staff to conduct mock surveys throughout your organization. You will unlock the ability to generate robust reports, identifying trends and areas for improvement across your system. The Mock Survey Tool can be used to enter findings, create final reports, validate plans of action, and generate executive summaries.

## Key features

- Up-to-date standards: Our platform enables you to enter findings for the most recent standards, ensuring your mock surveys are aligned with the latest JCIA requirements.
- SAFER<sup>™</sup> Matrix format: Our platform generates a SAFER<sup>™</sup> Matrix report, making it easier to identify high-risk and widespread findings.
- Plans of Corrections tracking: Our platform allows you to track Plans of Action, confirming identified problems are corrected promptly.

By conducting your mock survey process through our Mock Survey Tool, you can save time and resources, while ensuring your health system remains compliant with the latest standards.
