Foreword

Introduction

About the Editors

About the Authors

Chapter 1: The Hourglass Model for Practical Improvement Measurement

Challenges of Measurement in Health Care

The Hourglass Model for Practical Improvement Measurement

Measurement for the Improvement of Health and Health Care

Chapter 2: Before Measurement Begins

What to Expect in This Chapter

Rationale

Scope, Scale, and Equity Considerations

Informatics in Improvement Measurement

Take Home Points

Chapter 3: Words Before Numbers: Developing Measurement Definitions and a Data

Collection Plan

What to Expect in This Chapter

The Inverted Triangle Approach

Types of Measures

Concept-Forward Design

The 5-Questions Data Collection Plan

Take Home Points

Chapter 4: Developing a Data Analysis Plan

What to Expect in This Chapter

Developing a Data Analysis Plan

Step 1: Refine the Data Analysis Plan with Data Operationalization

Step 2: Specify Data Attributes and Sources

Step 3: Prioritize Your Data Collection Plan

The Data Analysis Plan

The Data Visualization Plan

Application of Concepts

Take Home Points

Chapter 5: Improvement Measurement Using Run Charts

What to Expect in This Chapter

Developing Your Improvement Data Strategy

Turning the First Data Point Into Analysis over Time

The Big 3 Approach to Assessment

Take Home Points

Chapter 6: Statistical Process Control Charts for Continuous Data

What to Expect in This Chapter

Introduction to Statistical Process Control

SPC Chart Analysis: The Big 3 Approach

Preparing Your Data

Choosing the Right SPC Chart for Your Data

SPC Charts for Continuous Data

Take Home Points

Chapter 7: Statistical Process Control Charts for Attribute Data

What to Expect in This Chapter

SPC Analyses for Attribute Data

SPC for Dichotomous Data (np- and p-Charts)

SPC for Counts Data (c-Charts and u-Charts)

Cross-Sectional SPC for Attribute Data

Take Home Points

Chapter 8: Statistical Process Control for the Analysis of Rare and Infrequent Events

What to Expect in This Chapter

Framing an Analysis of Rare and Infrequent Events

SPC Approaches for Rare Events Analysis

Take Home Points

Chapter 9: Advanced Statistical Process Control Methods for Special Situations

What to Expect in This Chapter

Revised SPC Analysis: Fixed Limits and Split Limits

Reducing Hospital Transfer Times Using Split-Limits Analysis

Reducing Unwarranted Transfers Using Fixed- and Split-Limits Analysis

Other Advanced SPC Analysis Methods

Moving Average Statistical Process Control (MA-SPC)

Cumulative Sum (CuSum)

The Risk-Adjusted Sequential Probability Ratio Test (RA-SPRT)

Research Designs in Improvement and Implementation Research

Take Home Points

Chapter 10: Disseminating Improvement Results

What to Expect in This Chapter

The Benefits of Disseminating Improvement Work

Planning Dissemination

Sharing Data Before Work Is Completed

Disseminating Results After Completion

Take Home Points

Appendix: Detail and Discussions on Advanced SPC Methods

What to Expect in This Appendix

Section 1: Central Line–Associated Bloodstream Infections (CLABSIs) Using Fixed-Limits Analysis

Hospital Length of Stay (Split-Limits Analysis)

Section 2: The Risk-Adjusted Sequential Probability Ratio Test (RA-SPRT)

Section 3: R Programming Code for RA-CuSUM and RA-SPRT Charts

Afterword

Glossary
